

Quality and Environment Policy

SmarDTV Global designs and develops innovative, integrated and secured solutions and platforms designed to become profitable growth factors.

In a context of hard international competition, the increasing concern about quality and environment has gradually translated into regulatory requirements and expectations of exemplary behaviour from the clients.

The control of the environmental impacts induced by the activities of SmarDTV Global and customer satisfaction must now be apprehended as a tool of valorisation and competitive advantage both internally to employees and externally to all stakeholders.

Consequently, committed to a responsible approach, SmarDTV Global creates the favourable conditions to take into account such considerations and legal and environmental requirements in the framework of its development.

Towards these issues, the implementation of our Integrated Management System (IMS) has to enable us to assess the effectiveness of our work and of our progress to regularly improve our performances in terms of environmental protection and customer satisfaction.

This reflection is the result of a policy of transparency committed and incorporated into our culture of innovation, anticipation and responsiveness.

In this frame, I am committed to pursue the culture of permanent improvement of the performances in all our activities and to put in place responsible means and behaviours aiming to reach the following objectives:

- Control and operational efficiency on a permanent basis
- Implementation of enhanced systems to push our suppliers to excellence
- Optimization of our time-to-market and of our costs
- Increase of our number of key accounts
- Arrangement of key differentiators
- Innovation in connected secured things area
- Improvement of our energetic efficiency
- Optimization of our waste management
- Promotion of environmental issue towards the relevant stakeholders

These goals show a strong will from SmarDTV Global to commit in favour of behaviour changes and compliance with legal obligations in order to ensure to our stakeholders (customers, suppliers ...) that they can find in us a relevant partner concerning the issues of durability, quality, and development respecting resources and taking into account the lifetime of our products.

Our team in charge of Quality and our Environmental Committee in charge of the management of our IMS are totally supported by the Management team.

Our policy and the corresponding goals are at least reviewed during the management review in order to confirm that they are relevant.

I ask all staff to join this policy, which constitutes an integral part of our strategy, and to actively participate in the improvement of our IMS.

Lionel BOISSIER
Chief Executive Officer
